bonus and benefits

Researcher – Life Sciences Executive Search

Our company

Barrett Webb is a leading specialist executive search firm working exclusively within the pharmaceuticals and life sciences industry across Europe. We partner with some of the world's largest pharmaceutical companies as well as with industry-leaders in the biotech, pharmaceutical, medical devices, vaccines and service sectors of the European life sciences industry.

We are retained on search assignments to appoint directors and business leaders for key General Management, R&D, Marketing, Sales, Operations and Technical appointments and this typically involves searching across Europe or globally for the most talented individuals.

We have a strong reputation for sector expertise, professionalism and for delivering excellence in our search process and outcomes. Every client that has retained Barrett Webb in the last five years has awarded us repeat business and over 90% of new business comes from referrals from our clients and contacts.

The opportunity

The role of the Researcher is vital to the successful delivery of executive search assignments. We are now expanding our research team in line with our overall business growth objectives, through the addition of a further Researcher.

Working closely with our Consultants, you will have a varied role that will include developing search briefs, researching the relevant business environment, and identifying, engaging with and evaluating potential candidates for specific executive search briefs. It is a role that requires the development of broad industry understanding and the ability to engage with and influence people at all levels, as well as strong analytical capabilities, networking skills and tenacity.

The Researcher will also contribute to the development of our information strategy, continuously developing our industry research, network and contact resources.

Candidate profile

Candidates will be graduates with experience in executive search research within or outside of the pharmaceuticals and Life Sciences sector. Alternatively you may currently be working as a consultant or resourcer within a life sciences recruitment firm and have the desire to move into executive search.

Key attributes are the abilities to focus and prioritise your time, communicate effectively through to Board/Senior Management levels, contribute business understanding, and influence decision-making.

Talented candidates will be offered a full training programme and superb career development opportunities both within and beyond this role.

To find out more about executive search and the role of the Researcher at Barrett Webb, please telephone our managing director, Sue Rossiter, on 01727 857755 or email your CV to her at sr@barrettwebb.com
